Austin G. Imperial

AI Project Manager

austingimperial@gmail.com · Quezon City, Metro Manila, PH
linkedin.com/in/austin-imperial · akaNiknok.github.io

Project manager who also builds, with a strong foundation in data science, full-stack development, and system optimization. I bring people, process, and technology into the same rhythm, turning messy delivery into calm, well-run systems, and I write the tooling that keeps them measurable. Experienced in Agile delivery, stakeholder coordination, API integration, and shipping scalable, cost-effective solutions.

EXPERIENCE

AI Project Manager — Pareto.ai
Nov 2025 – Present

- **Promoted one level (junior → mid) in less than 6 months**, rated "Exceeds Expectations (delivering one level above scope)."
- Owned AI delivery projects end to end both as sole **Lead PM** and Support PM for **a frontier-AI data company** (cold start through scoping, execution, and closeout), while growing from supporting 2 projects to owning/supporting 9.
- **Owned the expert recruitment pipeline** (intake, QA vetting, onboarding, trial to production) helping hit a quarterly delivery target at **106%**.
- Defused a sudden client pause mid-incentive week with **one clear update to an upset QA team** (what stopped, what they could still approve, a 7-day expiry so no work was lost), commended by leads and QA in the next sync.
- **Co-owned the QA pipeline**, defining the four-condition rule that certified 773 tasks as deliverable, and used **Jensen-Shannon divergence** to flag reviewers whose scoring had drifted.
- **Point-of-contact** for the client's RL-environment tooling platform and for cross-project **quality systems**; built a Python tool on the client's API that pulls all 1,700+ of a project's submissions in under 2 minutes (finding one by hand took ~30 seconds).

Assistant Project Manager & System Developer (Capstone Project, Ateneo) — ACTS Achi & Ahia, Inc.
2024 – 2025

- Led 6+ bi-weekly sprints on a hybrid-iterative framework, owning the risk register, budget tracking, and sprint planning (Excel, Trello).
- Automated consolidation of operational data with Excel Macros and PivotTables, and integrated Google Sheets with the enrollment system for real-time cross-department sync.
- Cut IT and Customer Success overtime **80%** (1,144 → 208 hours annually), contributing **₱625,540 in annual savings**.

Lead Backend Developer (Internship) — BlueMap: Blue Carbon Restoration Database
2023 – 2024

- Led backend development for a public geospatial web tool with two other developers, covering data flow from QGIS through Firebase to Mapbox, plus deployment and database optimization.

CORE SKILLS

Project management: Agile / Scrum, sprint planning, risk register & budget tracking, stakeholder communication, RACI & workflow design, process documentation.
Programming & development: Python, SQL, JavaScript; system & API integration, internal tooling.
Data science & analytics: data cleaning, visualization, reporting, geospatial analysis, machine learning.
Tools & platforms: Git/GitHub, Firebase, Google Sheets & Apps Script, Excel & Macros, Linear, Trello, Asana, Claude Code.
Languages: English · Filipino

EDUCATION

Ateneo de Manila University – 2025

BS Management Information Systems, specializing in Data Science & Analytics.
Shifted from BS Applied Mathematics - MS Data Science.
